

# IEM Collection Manager

## Overview

My web application will be an IEM Collection Manager, that would allow users to keep track of their various in-ear monitors/earbuds and their information. The purpose of this application is to act as a directory where you can add new IEMs/Earbuds, view your current collection, update any details , and the ability to delete any from your collection.

Each IEM will have data fields such as Brand, Model , Sound Signature, and Rating.

This Photo is from Reddit, This person is showing their IEM Collection, showing 6. Each one being different from another, from different brands, sound signatures and experiences. My web application will allow you to organize and keep track of everything in your collection.
